VICTORIAN STATISTICS

PUBLICATION NO.37/1965

INDUSTRIAL ACCIDENTS

This publication contains statistics dealing with industrial accidents in Victoria, reported to the Government Statist during 1962-63, with comparative tables showing figures for 1960-61 and 1961-62.

An Appendix has been included to provide information concerning accidents occurring on journey to and from employment or during a recess period, as well as disease cases.

The statistics are based on data obtained from insurance companies which insure against workers' compensation, and from several organizations with approved workers' compensation schemes. The Workers Compensation Regulations require approved insurers (and schemes) to submit to the Government Statist a report on each claim for workers' compensation, when the claim is closed, or at the expiry of 3 years if the claim is unclosed at the end of that time. At present, the collection is restricted to fatal cases, and to those where the worker was incapacitated for work for a period of one week or more.

The method of collection used has imposed certain restrictions and qualifications on the resulting tables appearing in this bulletin. These should be carefully noted, and may be summarized as follows :-

- (a) Although the term "Industrial Accident" is used, the collection actually represents claims for workers' compensation, and is subject to the limitations expressed by the Workers Compensation Act.
- (b) The Act excludes from the definition of "Worker" any person employed whose remuneration exceeds £2,000 per annum. Although some employers do insure against liability for employees whose income exceeds that amount, it is not mandatory to do so, and consequently some employees in this category will not be included in the tabulations.
- (c) Commonwealth employees are excluded from the provisions of the Act, and consequently some industry classifications are not covered at all whilst coverage is reduced in some other instances (e.g., Defence Services and Communications).
- (d) Self-employed persons are likewise excluded and therefore industrial accidents occurring to them will not appear in the statistics. This is likely to have considerable effect when considering, for instance, rural industries.
- (e) The Act provides for compensation for injury arising on journey to or from employment, or during a recess period. Details of such claims have been excluded from the tables in the main body of this publication, but have been shown separately in the Appendix.
- (f) Disease claims have likewise been excluded from the main tables, and shown separately in the Appendix. Experience gathered in this relatively new collection has shown that certain cases previously considered to be "disease cases", and therefore excluded from tables of industrial accidents, were in fact diseases precipitated or aggravated by some accidental event, and therefore should more properly have been included in the industrial accident collection. Examples of the type of disease more significantly affected by this approach include synovitis conjunctivitis and displacement of intervertebral disc.

As from 1962-63, therefore, each report showing a case of this type has been closely examined, and where it has appeared evident that some accidental event was responsible for the disease, the case has been classified as an industrial accident; where no such evidence was available the case has been classified as a disease and consequently excluded from the industrial accident section of this Bulletin.

The tables listed in this bulletin are in the form of summary tables; tables under detailed headings for industry, accident factor, and nature of injury have been prepared, however, and the information shown in them is available on request.

Definitions, etc.

1. Industrial Accident. For the purpose of this collection, the following definition has been applied:- "An Industrial Accident is a compensated work injury causing death, permanent disability, or absence of the injured person from work for one week or more, excluding journey cases, cases occurring during a recess period, and all disease cases except where the disease is considered to be precipitated or aggravated by an accidental event."
2. Industry Group. In Victoria, employers are rated for the purpose of workers compensation premiums according to the type of business conducted, a premium being fixed for each "trade". For the purpose of this bulletin, all employees, regardless of occupation, take the "trade" classification of their employer with the exception of clerical workers and domestics. When the list of "trades" was compiled by insurers, it was allied closely with the industry classification used for the 1947 Census. Accordingly, the industry groups shown in this bulletin approximate those used for Census purposes. However, as "Communication" employees are almost exclusively employed by the Commonwealth, and are consequently exempt from the provisions of the State Act, the remaining small numbers have been included with "Transport". Another variation is that "Finance" employees, whose work is normally of a clerical nature, have been included with "Other" industry together with clerical workers generally, who are subject to a special premium rate distinct from that charged for the industry in which they are employed. It should also be noted, that because of the very small numbers involved, tables in Part 2 (Females) include in the Industry Group "Other", figures relating to the Primary, Mining, Electricity, Building and Transport and Communication groups.
3. Accident Factor. The various accident factors considered have been listed in Tables 14 and 26. "Accident Factor" should not be interpreted as "Cause of Accident". In general it has been defined as "That underlying agency, other than human failing, which appears to contribute most materially to an accident, and which would be most likely to receive attention in efforts to prevent the occurrence of similar accidents".
4. Injury Site. In most cases the injury has been allocated to that part of the body affected by the injury. However, since effects of poisons, electrocutions, effects of weather etc., cannot be assigned in most cases to any particular site, they have been included in the heading "General and Unspecified".
5. Headings. For reasons of space it has been necessary to abbreviate many of the headings used, but detailed lists are available for inspection at this Office.

TABLE 27

VICTORIA - FEMALES : NUMBER OF ACCIDENTS BY PERIOD OF INCAPACITY, 1962-63

Period of Incapacity	Number of Accidents	Time Lost (Weeks)
1 week, but less than 2 weeks	1,785	2,286
2 weeks, " " " 4 "	1,144	2,945
4 " " " " 6 "	327	1,543
6 " " " " 8 "	170	1,146
8 " " " " 13 "	209	2,053
13 " " " " 26 "	106	1,828
26 " " " " 52 "	44	1,559
52 weeks and more	17	2,013
Total	3,802	15,373

As stated in the introductory notes on page 1, the Bulletin is primarily intended to provide information concerning industrial accidents, and, accordingly, details of claims arising on journey to or from employment, during a recess period, or from diseases, have been excluded from the foregoing tables.

However, these cases are of interest in their own right and this Appendix is therefore provided to show certain basic details about them.

Figures in the following tables, relating to disease cases, should be read in conjunction with the qualifying note (f) which appears on page 1 of this publication.

TABLE 28

VICTORIA - MALES : JOURNEY, RECESS AND DISEASE CASES :
NUMBER, COST OF CLAIMS AND PERIOD OF INCAPACITY, 1960-61 TO 1962-63

Year	Type of Case	Fatal		Non-Fatal		
		Number	Cost of Claims (£)	Number	Cost of Claims (£)	Period of Incapacity (Weeks)
1960-61	Journey and Recess -
